Only submerge full metal parts, i.e blades. Do not submerge parts for more than 1 hour.

### DETAILS

Follow this table for what is safe to use on major components. For all other questions contact service.

**(844) DRY-TRIM**

### HOW TO

Begin by powering down your equipment. For conveyors it is OK to leave them on for easier cleaning.

#### STEP 1 PREP

Read through this guide and prepare your cleaning area with gloves and tools.

#### STEP 2 SOAK

Soak the affected area with an approved solution using the chart below.

#### STEP 3 ABRABE

Using an approved abrasive, clean the affected area.

#### STEP 4 SUDS

Using soapy water and a lint free cloth, wipe away remaining debris and solutions.

### IMPORTANT!

Never use cleaners with ammonia, trisodium phosphate, or chemicals harmful to aluminum, stainless steel, polyurethane, or HDPE.

#### BLADES

When applying force, ensure the blade is laying completely flat on a flat surface.

Do not power wash or attempt to clean off the Teflon ring unless you are replacing it.

#### BELTS & BANDS

Do not use isopropyl alcohol on sorter bands.

It is safe to run the equipment on low speeds to fully clean the belts or bands.

Do not remove grease from belt or band drive axles.
