

TRICHOME PRESERVATION

Precise and Potent

The extended grinding areas and low RPM grinding speeds preserve your trichomes like no other machine. Allowing your business to achieve higher potency content, increasing your profits.

DEFINE YOUR GRIND

Ultimate Particle Control

Select your desired screen size and be confident in the precise and uniform material output. These grinders ensure all your plant material stays consistent, grind after grind.

DE-STEM AND FILTER

Automatically Remove Less Potent Material

The unique feature set of these grinders not only preserve trichomes and terpenes, but also filters stems, papers, and crutches. This allows your grind to stay purer and more potent, while increasing your production speed.

Low RPM Grinding Paddles

Grind plant material at low and controlled rate preserving trichomes and reducing heat.

Hot-Swappable Grind Screens

Quickly swap out grinder screens to keep you in control of your grind.

Grind Angle Control

Set the angle of your grind to keep material grinding longer and to filter out stems, papers, and crutches.

Wide Mouth Hopper

Easily feed grind material into the G Lite and keep your operation grinding longer.

- Whisper Quiet Motor
- Variable Grind Speed
- Infeed Hopper
- Heat Reducing Extended Grind Chamber
- Low RPM Grind Paddles
- Manual Tilt Control
- Single Stage Stem & Crutch Filtering
- Hot Swappable Configurable Grind Screen
- Material Catch
