

# THE HOLY ROLLER

COMMERCIAL CONE STUFFING PERFECTED

**GREENBROZ**

## MACHINE DETAILS

The Holy Roller is the most advanced cone stuffing machine on the planet. With the Holy Roller, you'll be able to stuff more than **3000 one-gram joints** an hour with unparalleled accuracy (less than 5% tolerance).

Want to produce gram joints and dog walkers with the same machine? No problem, the Holy Roller can stuff joints of various sizes with one universal cone.

- **Prerolls:** 3000+ per hour
- **Fills Accuracy:** less than 5% tolerance
- **Preroll Weight Range:** 0.3g - 1g (operator controlled)
- **Freeflow Anti-Clog Technology**
- **Active Weighing System**
- **A universal cone accommodates different fill weights**
- **Intuitive Full-Color Touch Screen**
- **Available as 2-line and 4-line options**

Designed by experts with over three decades of packaging experience.

# FEATURES AND BENEFITS

## 1. ACTIVE WEIGHING

Discrepancies in cone fills can seriously cut into your margins. Overfill joints, and you're essentially giving away product. Underfill them, and your customers will notice. The Holy Roller's active weighing features gives you unparalleled fill accuracy. Our secret? Most commercial cone stuffers weigh material before it goes into the cone. The Holy roller weighs cones in real time as they fill.

## 2. MINIMIZE CLOGS. MINIMIZE DOWNTIME

We know a single clog can take a considerable chunk out of your day. To cut down on clogs and ensure your operation can hit its production goals, the Holy Roller utilizes GreenBroz Proprietary cannabis separation technology at each cone fill station.

## 3. ONE CONE. TONS OF OPTIONS

Want to produce multiple joint sizes? No problem. The Holy Roller can fill joints from .3 grams to full grams with the same cone. As a result, you'll be able to fulfill multiple product SKUs with one paper size, making ordering, storage, and inventory more straightforward.

## 4. FREE UP STAFF AND ELIMINATE HARMFUL TOUCH-POINTS

Automating your joint production allows you to upskill employees and move staff into other areas of your business. Reduced handling time by your staff ensures less contamination and preserves the potency of your product.

## 5. ENGINEERED FOR THE PERFECT PARTICLE SIZE

Due to concerns about clogging, most commercial cone stuffers use cannabis that's been ground to at least 2mm, even though the best particle size for smokability is 3mm. Joints rolled with 3mm particles burn evenly and give consumers smoother, more flavorful drags.

We solved the clogging issue that plagues other commercial cone stuffers, so you can have the best of both worlds, more uptime for your machine and joints that use the perfect particle size.
